Since 2003, Vital Principle Institute has been training North American practitioners in Auricular Medicine, which has prepared the way for bringing Dr. Strittmatter back for this Advanced Seminar.

Integrating frequencies into Auricular Medicine patient assessment opens up a unique avenue for identifying specific deep healing issues presented by your patient. Some of your patients' hidden issues can only be found with the use of frequencies.

Equally valuable, the use of frequencies brings a method of treatment to your practice that will quickly become indispensable to your clinic.

In this Advanced Seminar, Dr. Strittmatter will provide a scientific background for understanding the use of frequencies in this medicine, and then step participants through its application in assessment of: blockages to healing; dental issues; orthopedic disorders; body acupuncture points; and other specific assessment questions related to your patient. By using the VAS pulse and selecting certain frequencies, particular information can be defined and gathered from active ear points; thereby refining assessment capabilities.

The laser also adds a vital treatment alternative to your clinic. For those patients who are resistant to needles, and children in particular, the laser offers a noninvasive, simple method of treatment that many of your patients will welcome. Ease of treatment, yet with no compromises on the depth and specificity of the healing offered.

To gain the most from this seminar, the following prerequisites are recommended:

- Knowledge of auricular acupuncture point localizations
- Ability to use the Vascular Autonomic Signal (VAS) for clinical assessment

Note: If using lasers for treatment alone, not assessment, the VAS is not necessary.

At the end of this 2-day seminar, participants will:

- Understand the science and use of frequencies for assessment and treatment
- Be familiar with the particulars of the equipment, lasers and the frequency hammer, and how to select the best tool for your practice; and
- Be prepared for clinical application of frequencies to patient cases.

**With this seminar, your assessment and treatment options
expand enormously!**

**Join VPI, Dr. Strittmatter, and other colleagues for this unique
Seminar.**
